# AQ-SPEC Air Quality Sensor Performance Evaluation Center

### **Evaluation Summary**

### Sensor Description

Manufacturer/Model: Aeroqual/AQY-R

> Pollutants: PM<sub>2.5</sub>

Time Resolution: 1-min

#### Type: Optical

## Additional Information

#### Field evaluation report:

http://www.aqmd.gov/aqspec/evaluations/field

Lab evaluation report:

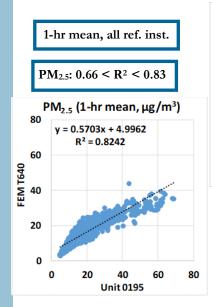

http://www.aqmd.gov/aqspec/evaluations/laboratory

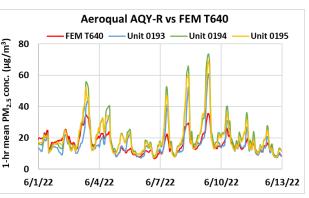

AQ-SPEC website: http://www.aqmd.gov/aq-spec

- The accuracy of the Aeroqual AQY-R sensors for PM<sub>2.5</sub> was 75.2% to 96.8% in the lab. Overall, the Aeroqual AQY-R sensors overestimated PM<sub>2.5</sub> measurements < 50µg/m<sup>3</sup> and underestimated high PM<sub>2.5</sub> measurements when compared to FEM T640x in the lab.
- The Aeroqual AQY-R sensors exhibited high precision for all conc., T/RH combinations for  $PM_{2.5}$ .
- The Aeroqual AQY-R sensors showed low intra-model variability in the field evaluation and moderate intra-model variability in the lab evaluation.
- Data recovery was 100% from all units tested in the field and laboratory evaluations.
- The Aeroqual AQY-R sensors showed moderate to strong correlations with the corresponding FEM GRIMM and FEM T640  $PM_{2.5}$  measurements from the field; and very strong correlations with the FEM T640x in the laboratory studies ( $R^2 > 0.99$  for  $PM_{2.5}$ ).
- The same Aeroqual AQY-R units were tested both in the field (1<sup>st</sup> stage of testing) and in the laboratory (2<sup>nd</sup> stage of testing) against reference PM instruments.

# Field Evaluation Highlights

- Deployment period 04/14/2022 06/12/2022: the Aeroqual AQY-R sensors showed moderate to strong correlations with the PM<sub>2.5</sub> mass concentration as recorded by FEM GRIMM and FEM T640, respectively.
- Data recovery from all units was  $\sim 100\%$ .

Coefficient of Determination ( $R^2$ ) quantifies how the two sensors followed the  $PM_{1.0}$ ,  $PM_{2.5}$ , or  $PM_{10}$  concentration change by the reference instruments.

An  $R^2$  approaching the value of 1 reflects a near perfect agreement, whereas a value of 0 indicates a complete lack of correlation.

# Laboratory Evaluation Highlights

### Accuracy (PM<sub>2.5</sub>)

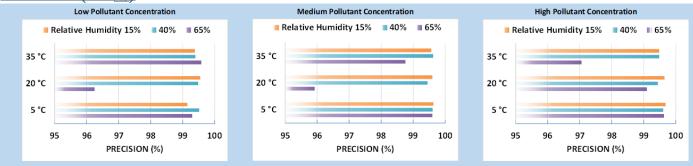

A (%) = $100 - \frac{ \overline{X} - \overline{R} }{\overline{R}} * 100$			
Steady State #	Sensor Mean (µg/m³)	FEM T640x (μg/m³)	Accuracy (%)
1	11.6	9.3	75.2
2	16.4	14.3	85.6
3	54.8	52.6	95.7
4	149.2	154.1	96.8
5	314.3	327.1	96.1

Accuracy was evaluated by a concentration ramping experiment at 20°C and 40% RH. The sensor's readings at each ramping steady state are compared to the reference instrument.

A negative % means sensor's overestimation by more than two fold. The higher the positive value (close to 100%), the higher the sensor's accuracy.

### Precision (PM<sub>2.5</sub>)

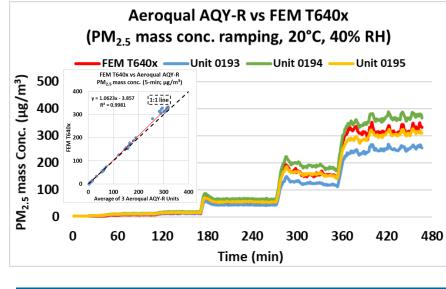

100% represents high precision.

Sensor's ability to generate precise measurements of  $PM_{2.5}$  concentration at low, medium, and high pollutant levels were evaluated under 9 combinations of T and RH, including extreme weather conditions like cold and dry (5 °C and 15% RH) cold and humid (5 °C and 65% RH), hot and humid (35 °C and 65% RH), or hot and dry (35 °C and 15% RH).

### Coefficient of Determination

i.

The Aeroqual AQY-R sensors showed very strong correlations with the corresponding FEM  $PM_{2.5}$  data ( $R^2 > 0.99$ ) at 20°C and 40% RH.

### Climate Susceptibility

From the laboratory studies, temperature and relative humidity had minimal effect on the precision of the Aeroqual AQY-R sensors' PM<sub>2.5</sub> measurements. Spiked concentrations were observed at the 65% RH change points at 20°C and 35°C.

Observed Interferents N/A
