Project: Beverly Hills High School-Future South Site Improvements Project
Re: Estimated Additional Costs for After-Hours Earthwork Operations

Dear Mr. Ali:

The future South Site Improvements Project at Beverly Hills High School will encompass the reconfiguration and reconstruction of the football field and surrounding track, reconfiguration of the football bleachers and associated site work, construction of a new baseball facility and associated site work, and construction of a new parking lot with solar panel canopies.

Based upon current cost projections, due to the project not being under any contract at this point, the Beverly Hills Unified School District would have to incur an additional **\$2,803,767.00** in order to perform the earthwork activities after-hours. The after-hours requirement would extend the earthwork activities an additional 3 months longer than the already forecasted 6-month duration.

Respectfully,

Elliott Meier, CCM
Project Manager, Quality Coordinator
