

①

• We families are concern about our health in our community.

We all are being living in this community of Wilmington, CA. for more than 35 year and It's sadly how we are being impacted by living near railroads, heavy duty vehicles, and cargo handling equipments.

To our knowledge a single train it's currently worse than those 400 heavy duty trucks.

We at Wilmington community are being exposed to higher rates of asthma, heart diseases and cancer due to Nitrogen oxide and diesel particulate from heavy duty vehicles.

• We want to create a bigger and better change for our future generations.

We want less activity on rail yards and cargo.

All our families has the rights to live and breath a better clean air.

②

• As every day counts in our lives, we deserve more than 235 days of a good air quality as soon as possible.

We know there are possibility of a zero emissions to replace dirty diesel.
